# Holiday Calendar

By:
Kyle M, Emilee C, Mallory S, Montana S, Joseph S

What is our Project?

We are making a google calendar that can shows users what holidays are occurring each month of the year in a list format. Users can eventually add their own events to a shared calendar for group sized collaboration and or just to see what others are doing on any given day.

Proposal

Our program will utilize a Google API to obtain information pertaining to the current month such as important dates and holidays from Google's servers. Our client operations will target those who would like to:

- Add their own events/holidays
- Observe what events/holidays other users have added
- Get a summarized list of holidays for the current month

Statement Of Work

Our program will take six and a half weeks to complete. Management and Developers will be working remotely with all contributions being made via Github.

Program milestones:

- 6/25/22- Completion of Statement of Work and Project Proposal
- 7/9/22-Implementation of API and login/out system
- 7/23/22-Create code that allows the client to save and load personal calendar with created events
- 8/3/22-Create code so that clients can share and view each others calendars

Plans for the future

We are going to make it to where people can add in their own events and holidays. That way people can see what other peoples plans are for that day. We will also try to implement a profanity filter for any inappropriate and foul language.
